

"We were able to successfully merge our two existing systems into crossbase. With this modern tool we can deliver media-compatible output for all channels and are ready for future requirements."

Kurt Wohlgenannt, CIO, Authorized Signatory, Schmidt's Handelsgesellschaft mbH

SOLUTION DESCRIPTION

Schmidt's Handelsgesellschaft mbH emerged from the companies Schmidt's Erben and Weyland/Steiner. Since both companies worked with different PIM systems, it was decided to introduce a new common PIM system and implement it with crossbase.

The focus during the conception was on the possibility to enter data quickly and easily. This is a particular challenge, as several thousand articles per supplier often have to be updated and compared in the dealer area.

Currently, more than 200,000 articles are imported from the ERP system to the crossbase solution via the XML interface where they are being structured, enriched with additional content and prepared for print and online output.

Most product information is maintained at master product level. For this reason, the inheritance concept is used. This "inherits" defined content to the subordinate levels and thus minimizes the maintenance effort. In addition, some of the data maintained in crossbase is returned to the ERP system via the API interface, so that the data is always identical.

Another important criterion was print media production. This should be done quickly and easily. This has been achieved with the crossbase solution, despite a sophisticated layout in which, for example, the positioning of images should be mirrored depending on the page (left or right side). In addition to the regularly produced catalogs and brochures, special customer catalogs with individual volumes and special prices are produced for larger customers.

The company is currently evaluating and implementing a new shop system. This is then supplied with data via API server and delta services to Shopify from crossbase. In the meantime, the crossbase solution already delivers the content for the Weyland/Steiner shop - also via API servers.

Type of company:

The company founded by Josef Schmidt in 1887 in Bludenz (Austria) is one of the oldest and most successful companies in the hardware wholesale trade in Europe. It is a full-range supplier of construction, civil engineering products, fittings, tools, machines, factory equipment, chemical and technical products, work clothing, fastening technology and garden and power tools. SCHMIDT'S employs around 720 people at 14 Austrian locations and is 100% family-owned.

Company type:

Trade Industry:

Tools/construction elements/construction suppliers

Sales range:

Over 210,000 products

Sales volume:

approx. 173 million euros (2018)

Number of employees:

approx. 720 at 14 locations

ERP system :

UNITRADE

Type of software : Standard software

Type of solution: Standard solution

THE INDIVIDUAL SOLUTION COMPONENTS

- Bidirectional running interface from ERP to PIM, via API server and XML import
- PIM with integrated product and image database
- Printed sales catalogs and customer catalogs with price update via merchandise management
- Data provision for online shop via API server with JSON/REST interface
- Excel Configurator for Data Provisioning
- Data integration of supplier data
- Data provision for trading partners via BMEcat

APPLICATION MODULES USED

Data import

ERP interface

Product database

Media Asset Management

Text management

Channel Output Management

Print publishing

Data import configurator

Data export XML / Excel

API server

PRINTED MEDIA
